

## Investment Strategy

The Ostrica Global High Yield Bond Fund invests globally in a broad diversified portfolio of non-investment grade bonds, predominantly in the United States, Europe, the United Kingdom and Japan. Ostrica mostly invests in corporate debt that has a public listed equity arm or market traded CDS. We use forward looking models to calculate the probability of default and a fair value spread of the bonds in Ostrica's universe. ETFs are being used for tactical asset allocation purposes: active duration management, active spread management & active management of liquidity premia and we provide tail-risk protection by deploying dynamic futures strategies. Using these principles of strong risk management, the fund provides a very stable investment in global high yield bonds.
